

My Expenses

User guide

App link (tap to open)

<https://1lev1user.github.io/coursor-small-app/>

1. Install on iPhone / iPad (Safari)

- Open [the app link](#) in Safari (not Chrome / in-app browsers).
- Tap Share → Add to Home Screen → Add.
- Open the Home Screen icon for standalone use and safer storage.

2. Install on Android (Chrome)

- Open [the app link](#) in Chrome.
- Menu (☰) → Install app / Add to Home screen (or use the install banner).
- Open My Expenses from the app drawer or Home Screen.

3. Desktop & moving phones

Desktop: Chrome/Edge → open the URL → Install / "Install page as app", or bookmark. New phone: export Backup (JSON) on the old device → install on the new one → More → Backup & export → Import backup (replaces local data after confirm).

4. What this is

My Expenses is a euro (€) spending and income tracker that runs in the browser as a Progressive Web App (PWA). No account, no cloud sync — all data stays on your device. Log expenses, follow a monthly spend budget, set Savings (0–100% of that budget, € or %), track income and recurring subscriptions, and export JSON backups or month CSV files.

5. Who it is for, and why

Built for personal use by people who receive access from Ľevs Krilovs. It is not a public app-store product. Use it when you want a private, device-local budget tracker without signing up or syncing to a server.

6. Who developed it — sharing rules

My Expenses was developed by Ľevs Krilovs. The application link and this guide may be shared only by him. Do not redistribute without his permission.

Sharing notice. Developed by Ľevs Krilovs. Share only with his permission.

7. Main tabs (after install)

- Add — log a new expense (amount, category, subcategory, date, note); use + to add a category or turn a note into a subcategory
- Month — this month's budget left, category progress, expense list
- Chart — visual spending breakdown for the selected month
- More — Plan, Income, Subscriptions, Categories, Backup & export (see Settings guide on the next page)

Settings guide — More

Every control under the More tab, in order. Jump links at the top of More scroll to each section.

Open the app: <https://1lev1user.github.io/coursor-small-app/>

Plan

Set your monthly spend budget (the pool you plan to spend this month) and usual monthly income. Saving Plan updates category euro amounts when a category uses a fixed € limit. The spend budget is separate from income; leftover budget is split across flexible categories.

- Monthly spend budget — required; greater than zero
- Usual monthly income — used for cash/income views; greater than zero
- Warnings appear if pinned category shares exceed 100% or leave unallocated leftover

Income

Manage extra income (one-off amounts beyond usual income) and income categories (e.g. Salary, Other).

- Extra income list — edit or delete past entries (amount, date, category)
- Add extra income — category, amount (EUR), date
- Income categories — rename, delete, or add new labels for income only (separate from expense categories)

Subscriptions

One place for the Subscriptions budget share and your recurring list. This category is not listed again under Categories.

- Budget share / Edit plan — Flexible (gets leftover %) or Fixed (set % or € of the monthly spend budget)
- Recurring list — each item: name, usual amount, day of month; delete when no longer needed
- Add subscription — creates a reminder; when due, the app can prompt you to log the charge as an expense in Subscriptions

Categories

Expense categories (except Subscriptions, which lives above, and system Uncategorized). Savings always appears here as Fixed and cannot be deleted.

- Edit plan — Flexible or Fixed; Fixed amount in % or € (toggle). Helper text shows the other unit.
- Savings — Fixed only; € preferred; may be 0; cannot be negative; cannot exceed 100% / the full monthly spend budget
- Rename / Delete — delete moves that category's expenses to Uncategorized
- Subcategories — add under a category for finer tracking on Add expense
- Add category — new expense category as flexible or fixed (or use + on the Add tab for a quick flexible category)

Backup & export

Keep a copy of your data. Browsers can clear site storage; Home Screen install plus regular JSON exports are safer.

- Export backup (JSON) — full restore file for this or another device; updates "last backup" date
- Import backup — choose a JSON file; confirms counts, then replaces all local data
- Month CSV — Europe (; + comma decimals) or Standard (, + dot decimals) for the month you have open in Month
- Backup reminder — appears if you have data and no backup in 30+ days

First-run setup (reminder)

Before More is available, setup asks for monthly spend budget, Savings (€ or %, including zero), and usual monthly income. Those values are the same ones you later edit under Plan / Savings.
